Professional Summary

Aspiring AI/ML engineer with hands-on experience in machine learning, data analysis, model evaluation and predictive modeling. Proficient in Python, Scikit-learn, Pandas, Numpy, Natural Language Processing(NLP) and Data Preprocessing, with practical exposure to building classification models and extracting insights from real-world datasets. Strong foundation in problem-solving, data structures, and analytical thinking

Internships / Experience

Machine Learning Intern, Techover Infotech and Productions 05/2026 – Present

- Built a **Customer Churn Prediction** model using **Gradient Boosting**, achieving **88% precision**.
- Performed **feature engineering** and predictive analytics on historical customer data to identify at-risk customers.
- Applied end-to-end ML techniques to develop business-focused predictive solutions

Python Developer Intern, Blue Eyed Digital Technologies Pvt. Ltd. 06/2025 – 07/2025

- Developed a **Student Record Management System** using **Python** and **SQLite** with **CRUD operations**.
- Built a **Logistic Regression** model to predict student pass/fail outcomes using **Pandas** and **NumPy** for data preprocessing.
- Integrated machine learning with database management to support data-driven decision-making.

Education

Bachelor of Technology (B.Tech) – Computer Science & Engineering (Artificial Intelligence) 2023 – 2027

Anand International College of Engineering, Jaipur
CGPA: 8.7

Technical Skills

Programming Languages

Python, C++

Libraries & Frameworks

NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn

Tools & Platforms

Git, GitHub, Jupyter Notebook

Machine Learning & Data Science

Classification, Regression, Model Optimization, Feature Engineering, Data Preprocessing, Exploratory Data Analysis (EDA), Feature Scaling, Hyperparameter Tuning, Natural Language Processing(NLP), Supervised and Unsupervised Learning

Computer Science Fundamentals

Data Structures & Algorithms, Object-Oriented Programming (OOP), SQL

Projects

Cancer Detection using Machine Learning, Python 02/2026 – 03/2026

- Built a **Cancer Classification** model using **Logistic Regression** and **SVM** (~90–92% accuracy)..
- Optimized performance using **GridSearchCV** for hyperparameter tuning.
- Evaluated models using **accuracy, precision, recall**, and **confusion matrix**.
- **Tools:** Python, Pandas, NumPy, Scikit-learn, Matplotlib.
- **Impact:** Demonstrated ML-based support for early diagnosis and healthcare decision-making

Credit Card Fraud Detection, Python 12/2025 – 01/2026

- Developed a **Credit Card Fraud Detection** model using **Logistic Regression** (~88–90% precision).
- Handled class imbalance using sampling techniques to improve recall.
- Performed data cleaning and feature analysis on 10,000+ transactions.
- Evaluated performance using precision, recall, and F1-score.
- **Tools:** Python, Pandas, NumPy, Scikit-learn.
- **Impact:** Built an efficient fraud detection system to support transaction security

Research / Publications

Research discussing evolving cybersecurity challenges and future frameworks for secure data transmission 01/03/2025

International Journal of Creative Research Thoughts (IJCRT)

The study explores emerging technologies and strategies to enhance data protection and system security.
